In the Matter of)
)
Amendment of Section 73.202(b),)
Table of Allotments,) MM Docket No. 98-158
FM Broadcast Stations.) RM-9342
(Grants and Peralta, New Mexico))

To: Chief, Allocations Branch

COMMENTS IN SUPPORT OF NOTICE OF PROPOSED RULE MAKING

Educational Media Foundation ("EMF"), permittee of noncommercial educational FM Station KQLV, Channel 288C, Grants, New Mexico (FCC File No. BPED-961118MA), by its undersigned attorneys and in response to the Commission's *Notice of Proposed Rule Making* in the above-captioned proceeding, DA 98-1727 (released September 11, 1998) ("NPRM"), hereby files these Comments in support of the *NPRM*'s proposal to substitute Channel 288C1 for Channel 288C at Grants, New Mexico, to reallot Channel 288C1 to Peralta, New Mexico, and to allot Channel 244C3 to Grants.

1. EMF commenced this proceeding on July 28, 1998 with its filing of a Petition for Rule Making requesting the Commission to initiate a proceeding to amend the FM Table of Allotments as proposed in the *NPRM*. EMF demonstrated in its Petition that this channel substitution and allotment at Grants and reallotment at Peralta, and the concomitant modification of KQLV's license to specify operation on Channel 288C1 at Peralta, would comply with the

No. of Copies rec'd 04
List A B C D E

Commission's technical requirements,¹ would not deprive Grants of any existing service, would result in the provision of service to a community warranting such service, and would result in a preferential arrangement of allotments. Specifically, EMF showed that there would be a net population gain from the adoption of the proposal, that Peralta would receive its first local aural service and that four local aural transmission services would remain in Grants upon adoption of the proposal. Moreover, adoption of the proposal would not deprive Grants of any existing service since KQLV is an unbuilt facility and would not result in a net loss in the number of allotments to Grants since the proposal includes a new allotment to Grants, for which EMF has promised to apply. Finally, grant of EMF's request will permit KQLV to commence service to the public more expeditiously. As EMF pointed out in its Petition, the Forest Service, which administers the land on which the KQLV transmitter site is located, has indicated that the site must be redesignated from low to high power usage in order for KQLV to operate at its authorized ERP, a process that would likely take a minimum of two years. Thus, grant of the instant reallocation request will allow EMF to avoid such delay in the provision of new service.

2. In response to EMF's Petition, the Commission instituted the instant rule making proceeding to more fully consider EMF's proposal. In its *NPRM*, the Commission asked that EMF provide information showing the area and population that would lose service by the proposed reallocation to Peralta and relocation of the KQLV transmitter site as well as the reception services available within both the loss and gain areas. As an initial matter, EMF notes that KQLV is unbuilt. While the Commission considers important the potential service that

¹Although, as indicated by the Commission, in order to accommodate EMF's desired transmitter site, Channel 288C1 must be allotted to Peralta with a site restriction of 12.3 kilometers west.

unbuilt stations represent, in recognition of the fact that such stations are not a service on which the public has come to rely, the Commission does not consider their removal from a community to represent the same concerns with loss of service that removal of an operating station would represent. *See Sanibel and San Carlos Park*, 10 FCC Rcd 7215 (MMB 1995); *Florida, Pawley's Island and Atlantic Beach, South Carolina*, 8 FCC Rcd 8657 (MMB 1993); *Glencoe and Le Sueur, Minnesota*, 7 FCC Rcd 7651 (MMB 1992). Moreover, as demonstrated in the attached Engineering Statement, adoption of EMF's proposal would increase the net population receiving 1 mV/m service from the station by more than 370,000 people. Specifically, 396,667 people within an area of 8,403 square kilometers will gain service from KQLV as a result of the substitution at Grants and reallocation of Channel 288C1 to Peralta, while only 25,449 people within an area of 12,019 square kilometers will lose service. Engineering Statement at Exhibits E-6 and E-7.² In addition, more than 70% of the population that will experience a loss of service will continue to receive service from at least five other aural services, and almost 87% of the population losing service will receive service from at least five other aural services after the allotment of Channel 244C3 to Grants, as proposed herein, and commencement of service by that station. *Id* at Exhibit E-6.³ Accordingly, the majority of the loss area will continue to be well-served after the reallocation to Peralta. *See Garberville and Hydesville*, 9 FCC Rcd 3125, 3125-26 n.5 (MMB 1994).

²Area and population figures for Peralta are based on a maximum Class C1 facility at the community's reference coordinates.

³*Cf. Llano and Marble Falls, Texas*, 12 FCC Rcd 6809 (MMB 1997) (granting proposal to reallot sole local radio service from Llano, Texas to Marble Falls, Texas as the larger community's first local service where petitioner proposed a new allotment to Llano and pledged to file an application to operate on the channel at Llano and, if authorized, to build the facility promptly).

3. Moreover, since KQLV will provide more than 50% of the Albuquerque, New Mexico Urbanized Area with a 70 dBu signal in the event that EMF's reallocation request is granted, the Commission requested that EMF provide a showing that Peralta warrants a first local service preference.⁴ The Commission relies primarily on the following three criteria to determine if a first local service preference is warranted: (a) signal population coverage; (b) relative sizes and proximity of the suburban community and the adjacent city; and (c) interdependence of the suburban community with the central city. *Headland, Alabama and Chattahoochee, Florida*, 10 FCC Rcd 10352, 10355 (MMB 1995). With respect to signal population coverage, EMF's proposed facilities at Peralta will place a city grade signal over both Peralta and Albuquerque. As for size and proximity, the 1990 Census listed Peralta's population as 3,182 and Albuquerque's population as 384,736. Furthermore, the distance from Peralta to the outskirts of Albuquerque is approximately 20 miles, and the city centers of the two communities are approximately 25 miles apart.

4. As the Commission has recognized, however, signal population coverage and the size and proximity of the specified community to the central city are pertinent, but have less significance than evidence of interdependence. *Faye and Richard Tuck*, 3 FCC Rcd 5374, 5378 (MMB 1988). In this case, the two communities, though disparate in size and in close proximity, are not interdependent. Specifically, as EMF indicated in its rule making Petition, Peralta is a Census Designated Place with its own post office, zip code and volunteer fire department as well as a school, Peralta Elementary School, and a church, Peralta Memorial United Methodist. Moreover, EMF demonstrated that the community contained a significant

⁴EMF pointed out in its Petition that the community of Peralta currently has no local aural transmission service, while Grants currently is served by KAIU(FM), KMIN(AM), KQEO(FM) and KTHR(FM).

number of retail businesses given its size, including Peralta Power Equipment and Peralta Signs, as well as other businesses that do not include "Peralta" in their names, such as a fitness center, a child day care center, a cabinet manufacturer, a tire company, a pharmacy, an automobile repair shop, a beauty salon, a used car dealer and antiques stores. In addition, Peralta includes a hospital, Namaste Child & Family Development Center, and a catholic church, Our Lady of Guadalupe, as well as other businesses, including an engineering firm, a computer and networking company, realty companies, an insurance company, a financial services company, an equipment rental company, mobile home builders, a drilling company, miniature horse sellers and many others. *See Exhibit B hereto.*⁵ The Commission has granted a first local service preference in similar circumstances. *See, e.g., Lockport and Amherst, New York, 1997 FCC LEXIS 6820, at ** (MMB Dec. 5, 1997) (granting preference where suburban community located within Urbanized Area only 7 miles from city center but was listed in U.S. Census, had local schools, police department, library, Chamber of Commerce, businesses, churches, post office and zip code); *Headland, Alabama and Chattahoochee, Florida, 10 FCC Rcd 10352* (MMB 1995) (granting preference where proposed facility would place a city grade signal over both suburban community and adjacent city and city centers separated by only 8 miles where only a moderate degree of interdependence exhibited).

5. Finally, as EMF demonstrated in its rule making Petition, good cause exists for grant of the reallocation proposal. In order to construct the KQLV facilities as authorized in the

⁵Moreover, the weekly county newspaper, the County News-Bulletin, serves county residents, and Peralta listings appear in the Belen telephone book. *See Exhibit B.* Thus, while some services, such as local newspaper, secondary schools, sheriff and local governance, are provided by Valencia County or Los Lunas, the county seat, no services are provided by Albuquerque or Bernalillo County, the county in which Albuquerque is located; and while the communities within Valencia County, including Peralta, may be moderately interdependent, this relationship does not extend to Albuquerque.

construction permit, the U.S. Forest Service must redesignate the transmitter site from low to high power usage, a process that will likely take a *minimum* of two years. Accordingly, should the Commission fail to authorize the community of license change requested in these proceedings, it will be some time before EMF is able to provide a new service to Grants.

6. EMF hereby reiterates its expression of interest in the substitution at Grants and reallocation to Peralta, New Mexico of Channel 288C1 as well as in the allotment of Channel 244C3 to Grants, New Mexico. If the proposal set forth in this proceeding is adopted, EMF will expeditiously file the appropriate application to implement the KQLV facilities at Peralta. EMF will also file a Form 301 application for Channel 244C3 at Grants when the Commission opens a window and if authorized, will proceed promptly with the construction and operation of the new station.

For the foregoing reasons, EMF urges the Commission to adopt the *NPRM*'s proposal to substitute Channel 288C1 for Channel 288C at Grants, New Mexico, to reallocate Channel 288C1 to Peralta, New Mexico, and to allot Channel 244C3 to Grants.

Respectfully submitted,

EDUCATIONAL MEDIA FOUNDATION

Exhibit A

ENGINEERING STATEMENT

EXHIBIT E-1 **ENGINEERING STATEMENT**

The information and data contained within these Engineering Exhibits were prepared by Educational Media Foundation in support of comments to Notice of Proposed Rule Making, MM Docket No. 98-158, released September 11, 1998.

I. DISCUSSION

In paragraph four of the Notice, the Commission requested additional information from the petitioner concerning existing aural broadcast services within the proposed gain and loss areas. This report serves to address these issues by providing the requested information.

Exhibit E-2 is a map showing the KQLV(FM), BPED-961118MA, 60 dBu service contour at Grants and the 60 dBu contour from a hypothetical Class C1 facility operating at the proposed allotment reference coordinates for Peralta. The Channel 288C1 reference coordinates are:

North Latitude: 34-49-46
West Longitude: 106-41-15

For each FM station presented in these exhibits, terrain elevation data from three to sixteen kilometers on radials spaced at one-degree azimuthal intervals starting at True North were extracted from the computerized thirty-second point elevation database version of Elevation Data for North America, available at the Department of Commerce, National Geophysical Data Center, National Oceanic and Atmospheric Administration. A total of 131 points along each radial were linearly interpolated according to section 73.312(d).

The height above average terrain along each of the 360 radials was computed by averaging the elevations between three and sixteen kilometers below the antenna radiation center in accordance with section 73.313(d)(3).

The locations of the 60 dBu F(50,50) service contours were calculated according to the computer methods outlined in F.C.C. publication PB-249144, Field Strength Calculations for TV and FM Broadcasting. The computer methods use digitized data taken directly from the graph of section 73.333 Figure 1. Intermediate values are obtained using bivariate interpolation techniques for surface fitting.

Note that in the Petition for Rule Making (and in the original station application), the petitioner used 8 radials in computing the population served by KQLV(FM). In this showing population was computed using 360 radials. In the original Petition, area and population figures for the proposed Peralta allocation was computed based upon our intended application facility (diplexed with KLVO, Channel 249C1, Belen, NM). In this showing area and population are based upon a maximum Class C1 facility at the reference coordinates (the KLVO transmitter site).

II. LOSS AREA

A study was conducted to determine the number of AM and FM stations that provide full-time aural broadcast service to the area contained within the authorized KQLV(FM) 60 dBu service contour at Grants that will not be served from the Peralta facility. Exhibit E-2 shows the extent of the proposed loss area. Exhibit E-3 shows up to five commercial stations serving the loss area.

Full-time AM reception service is defined by the station's nighttime interference-free contour for non-Class A stations, and by the 0.5 mV/m groundwave contour for Class A stations. Nighttime interference studies were performed for all of the full-time AM facilities within the vicinity of the authorized and proposed KQLV(FM) 60 dBu contours to determine those AM stations that provide service to the area. Only those stations which provide first through fifth aural service to an area are shown on the Exhibit.

Also studied were the 60 dBu contours of all commercial FM stations in the area to identify those that provide some overlap to the KQLV(FM) contours at Grants and Peralta. Only those stations providing first through fifth aural service to an area are shown on Exhibit E-3. Exhibit E-8 tabulates the list of stations included on Exhibit E-3.

Exhibit E-3 shows the authorized and proposed KQLV(FM) service contours, and the service contours of the AM and FM stations providing first through fifth aural service within the proposed loss and gain areas. Exhibit E-4A through E-4F are a series of maps showing the proposed loss area and the contours of the aural service providers (first through fifth aural service). Shading is used to represent the areas that receive a specific number of aural broadcast services corresponding to the number indicated in the title block of the map. Exhibit E-6 tabulates these data and depicts the populations and areas within the identified regions.

The results of this study indicate that 86 persons reside in the white area created by this Petition, however this one centroid is less than one kilometer away from KKOB(AM)'s nighttime interference free contour and represents only 0.3% of the loss population. 1,852 persons reside in the grey area served by one other aural broadcast station. Again, in the case of this single centroid, it is located within two kilometers of the protected contours of three commercial stations and within the city grade contour of one non-commercial station. 1,396 persons reside in the area covered by two other broadcast facilities. Of these persons, 1,365 would receive a 62 dBu signal from the existing KQLV CP site, and should this Petition be approved, would receive a 57 dBu signal from the Peralta allocation. 4,209 persons reside in the area served by four other facilities, all of these persons would be covered by the proposed Grants allocation on Channel 244C3. In fact, 86.9% of the persons within the proposed loss area will continue to receive at least four aural reception services and 70.4% will continue to receive five or more services.

III. GAIN AREA

The same type of study was performed to determine the number of existing aural broadcast reception services within the KQLV(FM) proposed gain area. A list of aural service providers is included in Exhibit E-8 (first through fifth aural service providers only).

Exhibit E-5A through E-5C are maps showing the areas within the proposed KQLV(FM) Peralta contour but outside the authorized Grants contour that already receive three, four and five-plus aural reception services. Again, each level of service is shaded and corresponds to the number

shown on the title block.

The proposed Class C1 facility at Peralta will result in fifth service to 219 persons and additional service to a total of 396,667 persons. These distribution data are tabulated in Exhibit E-7.

Exhibit E-9A and E-9B are maps depicting the KQLV(FM) Grants and Peralta contours and the distribution of 1990 census tracks in the area.

IV. ALTERNATE CHANNELS

As part of this proceeding, the petitioner has requested that Channel 244C3 be assigned to Grants to replace the Channel 288C allocation petitioner has requested by moved to Peralta. Exhibit E-10 shows the KQLV(FM) loss area with this new allocation. Allocation of this new channel will reduce the KQLV(FM) loss area from 12,019.0 square kilometers to 8,015.5 square kilometers, and population in the loss area from 25,449 to 3,768.

Additionally, in the White area (that part of the service area served by no other aural service provider) there is only one population centroid which contains 86 persons. At the coordinates of this centroid there are numerous fully spaced allocations which could be allotted. There is only one centroid in the "Grey" area served by only one other aural service counting 1852 persons. There are also numerous fully spaced allocations which could be allotted at the coordinates of this centroid. Additionally, in the area served by two other aural services, 1365 of the 1396 persons are at a single centroid which could also facilitate numerous allotments (see Exhibit E-11 for schedule of possible channels).

V. CONCLUSION

The petitioner reaffirms its intention to apply for Channel 288C1 at Peralta if it is allotted and Channel 244C3 at Grants if it is allotted and, if authorized, to build the requested facilities promptly.

It is believed that all methods employed in making the determinations contained within this Engineering Statement were in accordance with applicable FCC Rules and Regulations and good engineering practice.

DAIRY

Local dairy opens with Jersey cattle

By BOBBI MILLER
SPECIAL TO THE NEWS-BULLETIN

May 13, 1997, marked the opening of a new chapter in the life of Allen Sanchez: Seventy milk cows arrived at his Jersey Gold Dairy, and a new dairy operation — the only Jersey dairy in the state — began in the valley. Today, Jersey Gold is milking 133 cows. In the future, there will be more.

Sanchez has had a lifelong passion for nature — if you have a minute, ask him to tell you how to construct a rattlesnake trap — and has always dreamed of owning his own dairy. "When I was a kid in 4H, my dad always wanted me to show beef cows, but I only wanted to show dairy cows," he remembers.

Never a spectator in life, Sanchez does everything with zest — from his full-time ministry in the Catholic diocese's Renew program to his involvement with his family — Sanchez enters every endeavor with energy and optimism. His faith in God has sustained him through all the challenges he has faced.

"The day the 70 cows arrived on the dairy, I didn't have a single bale of hay on the dairy — but just after the cows arrived, a neighbor

Allen Sanchez
Opening dairy

came and make a deal with me for all the hay I'd need. God has blessed me over and over," he said.

Sanchez has never been one to hoard his blessings — his dairy has always been a family project. Nephews Emerson Torres is dairy manager, Joshua Duran is a dairy herdsman, and Carlos Sanchez works weekends feeding and milking.

In addition to the family, the dairy also employs Dylan Gilbert and Drew, Harmoni and Len Ridley. "Everyone has worked together and things are really going great — it's been six weeks since we've had a cow in a sick pen — and that means that everyone is doing their job," Sanchez said.

He looks for Jersey Gold to continue growing; he has diverse dreams someday of an ice cream plant, as well as a teen retreat center operating out of the dairy location.

Sanchez can't believe all the help people in the valley and around the country have given — and he organized a matanza in celebration. "This matanza is our way of saying 'thank you,'" he said.

A matanza is a traditional New Mexico barbecue. (Read about it elsewhere in this magazine.)

Emergency Preparedness Information

Floods

Before a Flood

- Know your neighborhood flood history.
- Consider purchasing flood insurance.
- Obtain sandbags, plastic sheeting, lumber, and towels.
- Install check valves in sewer traps or buy large stoppers to plug sinks, showers, tubs.
- Fuel vehicles in case evacuation is necessary.
- Monitor changing weather conditions.

During a Flood

If there is time

- Disconnect electrical and gas appliances.
- Shut off the water main.
- Bring outdoor items inside.
- Round up pets.
- Move valuables/essentials to upper floors.
- Stack sandbags away from the building.

Evacuation

- Use travel routes recommended by local authorities.
- Keep a radio on for news and updates.
- Watch for flooding at bridges and low areas.
- Don't drive over flooded roads. It's impossible to tell how deep the water is, or if sections of the roadway have been washed out.
- Don't try to cross water flowing above your knees.
- Passengers should abandon a stalled vehicle and move as a group to higher ground.

After a Flood

- Return home when authorities say it is safe.
- Let qualified specialists inspect your home and make repairs to structural damage and utility breaks before you re-enter.
- When inspecting your home for the first time, use a flashlight, not a torch or lantern. Sniff for gas leaks.
- Wear rubber-soled shoes and rubber gloves in case of severed electrical lines.
- Don't turn on electrical switches.
- Check electrical circuits only when electricity has been shut off.
- Don't use flooded electrical appliances until they have been repaired.
- Don't drink municipal water until the health department has declared it safe.
- Don't rush to pump out a flooded basement.

Local ZIP Codes

Post Office and county*	ZIP Code
